

PROFESSIONAL TREATMENT GUIDE

STR  BERI

CHEMICAL PEELS

A chemical peel is a technique used to improve and smooth the texture of the skin. Facial skin is mostly treated, and scarring can be improved. Chemical peels are intended to remove the outermost layers of the skin. To accomplish this task, the chosen peel solution induces a controlled injury to the skin. Resulting in wound healing processes begin to regenerate new tissues. The dead skin eventually peels off. The regenerated skin is usually smoother and less wrinkled than the old skin. Our Straberi Peels are created with years of clinical research which lead to a system that can extend to all Fitzpatrick skin types, age, and gender. Finally, a hybrid system that yield results.

Specially formulated treatment, combining glycolic and salicylic together that will de-clog pores and dry up active acne lesions. 4 hours down time. May experience superficial peeling.
